

**CANAAN FAIR SPEEDWAY RACERS  
GET FIRST HAND LOOK AT CRATE ENGINE**

**This past Saturday, Canaan fair Speedway racers got a first hand look at a sealed GM spec engine at the Canaan Speedway banquet hall. RPM Racing Engines owner, Rick Paya, of Georgia, Vermont was on hand for the presentation.**

**Paya, whom is well known throughout the Northeast for building racing engines for all types of race cars, is also well established in the world of the crate, spec engine. His company is the Official spec motor sealer for the ACT Tiger Sportsman division that runs weekly at Thunder Road, and the Tiger Tour Series.**

**“The idea of the informational meeting was to inform our racers about the spec motors and sealing them properly. The RPM way seems to be a very cost effective way of making sure that these spec engines are not tampered with, keeping the competition playing field on level ground, something we at the track want, and this is also what the race teams want. Rick was gracious enough to bring a new spec engine to display for our teams, and this really allowed them a hands-on approach. Rick was very patient with all questions being asked, and answered any and all questions about the advantages and disadvantages of owning a crate engine, stated General Manager, Dick Therrien. I think the meeting was very informative and worthwhile for our racers. I can personally attest to the fact that I learned a lot about the crate engine today.”**
